

## Dummy Camera

## MODEL IN11G

### **Introduction:**

Please note that this dummy camera has been designed to act as a deterrent, and does not record any images or sound. It is intentionally placed in a noticeable place, so passing people notice it and believe the area to be monitored by CCTV.

### **Battery Installation:**

1. Lift up the hinge on the side of the camera.
2. Then lift the cover.
3. Insert two rechargeable AA batteries (not included).
4. Replace cover and press down on the hinge.

### **Installation:**

This Dummy Camera is rainproof and could be installed indoors or outdoors. Locate the area where you would like to install the dummy camera, and secure in place with the screws included. If the site is of stone or brick construction, make sure that you use the two raw plugs included.

### **Solar Powered LED Light:**

Once the batteries are installed, the inside LED light will blink per seconds to indicate the unit is working.

The flashing LED light is energized by solar powered rechargeable batteries saving you both money and the hassle of taking down the camera to change the batteries.

Rechargeable batteries are recommended; however, regular batteries (2 x AA) can also be inserted when using indoors.
